KedU&O.doc

by the way the Ked has by some reports about 7 feet of water in the hold with about 1 foot of oil on top. Also had reports of bunker fuel in one of the tanks. From what I've been told by several people is that the hull is sound and the water is from rain coming in through the open deck over the years. I have been in contact with Dick Walker at Ecology and the Coast Guard to keep them in the loop.

Just got the message that you called. I'll call the Hoffmans. FYI, my cell # is (b) (6) and is the best way to reach me.
